**Supplement:** 967-2002  
**Date:** 9-94  
**Insert With-**  
**Title:** "J" Series Diesel  
Parts Catalog Spec  
Advance  
**Number:** As Listed Below

This Supplementary Parts List Spec advances specific "J" series diesel generator sets as shown:

<b>"J" Series Models</b>	<b>New Spec Advance Letter</b>	<b>Catalog Number</b>
DJB Generator Spec AC to	D	967-0221
DJC Generator Spec AD to	E	967-0222
DJE Generator Spec AG to	H	967-0225
RDJC Generator Spec AD to	E	974-0221

Note that all models are being Spec advanced to a single letter due to limited computer space.

Model DJE was first manufactured in the double Spec letter AB and advanced through the alphabet (AB to AC, AC to AD, etc.) due to manufacturing changes using the double letter format to Spec AG and is now being advanced to the single Spec letter H as shown in the middle column above.

Models DJB, DJC and RDJC were first manufactured in the early 1960's beginning with the single Spec letter A. The Spec letters advanced through the alphabet (A to B, B to C....Z to AA, AA to AB, etc.) due to manufacturing changes and are now advanced to a single Spec letter as shown in the middle column above. Use caution when ordering service replacement parts for the DJB, DJC and RDJC models. Do not confuse 1994 single letter production models with 1960's single letter production models. Example: When the parts catalog lists two part number choices based on Spec letter differences such as "Spec A through R" and "Begin Spec S", use the "Spec A through R" part number for 1960's single Spec letter production and the "Begin Spec S" part number for 1994 single Spec letter production. Example: When the parts catalog lists three part number choices based on Spec letter differences such as "Spec A through AA", "Spec AB" and "Begin Spec AC", use the "Spec A through AA" part number for 1960's single Spec letter production and the "Begin Spec AC" part number for 1994 single Spec letter production. The following may also be used as a guide: The 1960's production generator set nameplates used a number(s) and letter(s) combination (i.e.: 3CR, 4R, 18R, 53CR, 57XR, 518R, etc.) for the voltage code and is shown near the center of the complete model and Specification number (i.e.: 12.5RDJC-9XR/8066E). With the 1994 production generator set nameplates the voltage code is no longer used (i.e.: 12.5RDJC8066E). When in doubt, obtain the complete model and serial number and consult the factory.

This "J" series diesel supplement covers the change for the "J" series product line standardization program. Some low usage feature options were made obsolete and some high usage feature options were made standard. The following pages reflect these changes. Page headings list the model (s) that the changes apply to. Page headings with no model listed apply to all models.

In addition, the generator page for each catalog has an expanded parts list for the generator and rotor through studs that were not completely covered in prior issues of the parts catalogs.

# INTRODUCTION

This catalog applies to the standard DJC Generator Sets as listed below. Parts are arranged in groups of related items. Each illustrated part is identified by a reference number corresponding to the same reference number in the parts list for that group. Parts illustrations are typical. Using the *Model* and *Spec No.* from the nameplate, select the parts from this catalog that apply to your set. Unless otherwise mentioned in the description, parts are interchangeable between models. Right and left sides are determined by facing the engine end (front) of the set.

\* - The Specification Letter advances (A to B, B to C, . . . Z to AA, AA to AB, etc.) with manufacturing changes. A Specification Number, other than 1, designates customer option(s).

\*\* - These generators have four load wires which are reconnectable for 120 volt 2 wire service, or 240 volt 2 wire service, or 120/240 volt 3 wire service. **NOTE:** Previously the C designation was not in the model.

£ - New model designation shown, begin during 1969. Previous designation did not use a decimal in the KW rating.  
EXAMPLE: 9.0DJC was formerly 9DJC and 12.0DJC was formerly 12DJC.

★ - Broad range reconnectable sets, refer to connection diagram inside Outlet Box cover.

## NOTICE!

ITEMS REFERENCED AS **OPTIONAL** INDICATE PART IS FACTORY INSTALLED AND MAY NOT BE APPLICABLE TO ALL MODELS. FOR FIELD CONVERSIONS ADDITIONAL PARTS ARE USUALLY REQUIRED.
